

Dark Fury Wheel & Tire Cleaner C66

TECHNICAL DATA SHEET

Description

Dark Fury is a truly unique product, used as a non-acid tire and wheel cleaner as well as a bug cleaner. The formula is safe and effective on most exterior surfaces including clear coat, painted steel and plastic. Dark Fury looks like motor oil when it is sprayed, but the “clinging” properties built in allow the active ingredients to break down brake dust as well as dirt and bugs on tires and grills. It has also been found to be an excellent cleaner for highly polished stainless and aluminum tankers when diluted properly. The unique blend of wetting agents, emulsifiers, builders, and solvents work together to penetrate and remove tough dirt and road film.

Advantage

Dark Fury is very easy to use by spraying on the surface to be cleaned and power washing off. Use of a pressure washer really helps blow off the dirt and grime that has been loosened from the surface. It is very mild on painted surfaces and metal. This inhibited high pH cleaner made with special surfactants is designed to prevent the high pH cleaner from pitting aluminum.

Directions

Dilute 4 to 1 with water. Spray on and agitate with a brush or spray off with high pressure water. Will not harm painted surfaces or factory aluminum wheels. Do not use on uncoated polished aluminum wheels. Adjust dilution accordingly for best results. Do not allow product to dry on surface.

Specifications

Physical form	Liquid
Color	Dark Brown
Scent	None
Density	9 lbs. per gallon
pH Solution	14+
pH 2% Solution	10.8
Biodegradable Surfactants	Present

Shipping Weight in Pounds

55 gallon plastic drum	495 pounds
30 gallon plastic drum	270 pounds
5 gallon plastic pail	45 pounds
