

Aqua Gloss F78

TECHNICAL DATA SHEET

Description

Concentrated water based silicone tire and interior dressing. Aqua Gloss is unlike any other dressing out because it will dry and actually repel dust from sticking to dashes and door panels. This product is designed to be diluted 1:1-4:1 (One gallon makes 2-5 gallons of ready to use dressing). We are using the highest durability silicones in this formula to insure the end result is a long lasting, non-greasy finish that dries quickly. Great for engine detailing and for use on door moldings and panels. Will not leave the surface greasy and will not sling off tires when allowed to dry.

Advantage

Zero VOC high gloss long lasting tire and interior dressing. Concentrate made to be diluted and make up to 5 gallons of product. Non-slinging formula. Great for detailing tires. Fortified with cross-linking amino functional silicones for outstanding shine and durability. No petroleum based solvents. Safe on wheels and will protect rubber and plastic. This formula provides a durable, long lasting wash-resistant high gloss appearance and protective coating. Environmentally safe.

Directions

Dilute Aqua Gloss with water and apply with sprayer or wipe to desired finish. If wiping on undiluted for maximum shine you will need Superiors "Tire Paddle" (DS69). If used full strength, Aqua Gloss has the same gloss as Cover All solvent based dressing. Dilute to reduce cost and still get the shine you need.

Specifications

Physical form	Liquid
Color	Aqua
Scent	Watermelon
Density	9 lbs. per gallon
pH Solution	7.5
pH 2% Solution	7.2
Biodegradable Surfactants	Not present
Optical Brighteners	Not present

Shipping Weight in Pounds

55 gallon plastic drum	495 pounds
30 gallon plastic drum	270 pounds
5 gallon plastic pail	45 pounds
